

Automated Fuel Management at the Pump

Everything you need
for an
easy to use
fuel or pump
management system.

One phone call to 817-992-DATA (3282) gets the ball rolling.

DataPak's family of FLOWrangers controllers are designed with the customer's needs and budget in mind. We will:

- use your existing pump
- use your existing power at the pump (saves dollars on installation)
- train your personnel in less than an hour to run fuel reports and add/delete FuelKeys using DataPak software loaded onto your PC running Excel® Windows® XP or Vista...

We build simple, systems to allow you to effectively control your fuel pump. We have not seen a situation yet where we could not use the customers' **existing pump** to provide an automated solution.
